

Traditions, innovations and perspectives of modern jewelry manufacturing

July 4 - 8, 2005

Hotel "Angleterre"  
Saint Petersburg  
Russia

international jewelry symposium

The **Symposium** was held on July 4-8, 2005 in "Angleterre" Hotel conference hall in Saint-Petersburg, Russia.

The **International Jewelry Symposium** is an annual international technological forum. Its main purpose is to bring together leading manufacturers, researchers, casters and technologists with the intent to interchange experiences, advanced technologies application and jewelry industry development.

**Vision numeric** took part into this multi-cultural event with one of our Russian resellers: **Novit**. Novit promotes all of our Type3 solutions including **3DESIGN**, the 3D CAD solution dedicated to jewelry and accessories creation.

The **Symposium** is the opportunity to make new business contacts, exchange ideas and experience with Russian and foreign colleagues - a chance not only to *improve your know-how* and product quality but also to *reveal new challenges for your business*. As we experienced the interest of Russian jewelers and related professionals is growing along with their investments into these new technologies.

The focus this year was put on "*Traditions, innovations and perspectives of modern jewelry manufacturing*". A variety of pertinent and useful conferences and discussions were held in the astonishing conference hall. Themes such as the efficient and productive way of using *CAD software* for jewelry manufacturing or the technological aspects of up-to-date *RP jewelry equipment* were discussed and they generated lively discussions and interests.

Our representative spoke on the theme: "*CAD/CAM software: the future of jewelry design*". The conference yielded many comments and questions especially regarding our dedicated solutions: **3DESIGN** and **TypeEdit**.

Overall, this 4<sup>th</sup> International Jewelry Symposium was a great success and is sure to see us next year!
