

## New training and technical support center in Los Angeles

Visit us @ 606 S. Hill street - Suite 810 and discover 3DESIGN Software Solutions

Since April 2005, a new **3DESIGN training center** has opened in downtown Los Angeles. Conveniently located on South Hill street in the heart of the Los Angeles jewelry district and only 30 minutes away from LAX airport, we are currently offering 4-day beginners training sessions every month and soon advanced classes.

Cyril Saelens, President of 3DESIGN Software Solutions, declares: "Our training program is both theoretical and practical. 3DESIGN software functions are explained through concrete examples so that students can relate to existing jewelry designs and models. Having jewelry experience, our Certified 3DESIGN trainers can answer any question. We also limit the number of students in each class to offer a more personalized experience."

Whether you are already using a CAD software package or do not have any previous experience with computerized designs, thanks to this training session you will discover why 3DESIGN software is today considered as the most advanced 3D jewelry design solution. You will also be surprised to see that 3DESIGN is much easier to use than you probably think. Of course, 3DESIGN Software Solutions also provides software demonstration at your convenience and technical support to all its customers.

For questions regarding training schedule, technical support or pricing please call (213)-624-6321.
