

13th INTERNATIONAL MEETING
OF JEWELLERY AND WATCH
TRADE PROFESSIONALS

It has been a real pleasure for the **Vision numeric team** to welcome its visitors on their common stand D30-E31 with the famous CNC machines manufacturer **Roland**. This leading French trade show for jewelry and related industries greeted numerous visitors during 3 days from various professionals' profiles who mainly came from France.

Contact us at: sales@type3.com or +33 4 74 70 8000

2 software solutions correspond to customers expectations:

- **TypeEdit Jewel** for 2D and 2,5D products
- and **3DESIGN our jewelry dedicated solution** to create the most exquisite designs in 3D.

On this occasion we presented our new and **worldwide partnership with the Roland JWX-10 machine**.

This partnership has been signed very recently and leads us to predict great incomes from this complete offer.

Once again, **3DESIGN** answered all the professionals' needs. Conceived by jewelers, this is the most adapted solution for jewelry.

The software's overall **ergonomy** fascinates our visitors. They mainly appreciated the power of the **deformation tools** and the **Parametric construction tree**.

As usual during the Print'Or show, our solutions' capabilities and ease-of-use impressed and seduced many visitors.

As a result, be sure to find the Type3 team again next year!
