
BIJOUX CONCEPT

Design Modelling Prototyping

+41 (0)79 640 05 14 – bijoux.concept@bluewin.ch

François Righi and **Susanne Dändliker** are running **BIJOUX CONCEPT** located in Neuchâtel in **Switzerland**. F. Righi comes from 2D/3D design world and S. Dändliker from the jewellery.

They create their models, design and prototype them. BIJOUX CONCEPT provides their customers with final pieces they sell either directly in their shop or to jewellers for whom they often realize a whole range of jewels.

Their style is rather contemporary; and as they always want to innovate François and Suzanne were looking for a program that could be a complement to jewellers' know-how.

 matches exactly their needs:

- it is compatible with **Macintosh**
- it works with **solids** and 3D environment is very important for designing
- the environment is simple and the **parametric** aspect amazingly useful
- and of course the program is full of dedicated **wizards** such as: **location for jewellery, prong and bezel setting, stones and material libraries** that you can personalise...

“The jewellery and setting tools are especially powerful. We improved creativity, originality and time saving!”

Suzanne and François just tested the **Version 4** of the program and were **impressed by the new Rendering module strength** which find more light/shade possibilities and even more precision. Plus the **Automatic pave** really makes the difference in terms of accuracy and time saving.

“We tried other software solutions but only 3DESIGN allows us to create unique pieces with such high quality standards that are required by our customers here in Switzerland.”
