

Baselworld 2005

The technical and sales teams of **Vision numeric** welcomed its visitors on its partner's booth: **POSALUX** who is specialized in milling and faceting machines <http://www.posalux.ch/>. The 8-day exhibition received visitors from all regions: Europe (Switzerland, Germany, France and Italy), Asia (Thailand) and North America.

The main trends were jewels with pale colours and pendants you can find on any kind of accessories.

The growing fame of 3DESIGN plus the design contest organised brought many visitors on the stand.

3DESIGN Version 4 was presented as a "première" as this released is planned for beginning of May.

The new power of:
- the **Rendering module**
- the **Parametric construction tree**
- and new **Setting functions...**

really impressed our visitors who confirmed that 3DESIGN is the most appropriate and dedicated tool for the jewellery market.
